Jaipur, Rajasthan

Summary

3rd-year B.Tech Computer Science student with a strong interest in problem solving, data-driven systems, and scalable software development. Skilled in Data Structures & Algorithms and experienced in building practical solutions through projects in trajectory data clustering, graph-based road network analysis, React web development, and blockchain systems. Developed projects such as Edulocker, a land registry system, a hospital blockchain project, and a college LMS platform. Comfortable working with Python, C/C++, Java, SQL, and React. Currently preparing for GATE 2027, strengthening core CS fundamentals. Seeking internship and entry-level SDE opportunities to learn, contribute, and grow.

Education

Bachelor of Technology in Computer Science

JK Lakshmipat University • Jaipur
CGPA - 9.180

07/2027

Honours List

12th Science

Shivprakash Memorial School • Silvassa
Percentage - 73

05/2023

Skills

Project Management, Machine Learning, C - Programming, Java, Python, C++, HTML, CSS, JavaScript, Full Stack Web Development, Red Hat Linux Administration, React, Algorithm Design, BlockChain

Experience

Teaching Assistant

JK Lakshmipat University Jaipur • Jaipur

01/2026 - Present

Served as a Teaching Assistant at JK Lakshmipat University, providing support in project management and machine learning courses. Assisted in developing course materials, conducting tutorials, and evaluating student performance. Played a key role in managing classroom activities and fostering a collaborative learning environment. Focused on enhancing students' understanding of complex topics through clear and concise explanations.

- Developed and organized course materials, contributing to streamlined class operations.
- Monitored and assessed student progress, providing feedback to enhance learning outcomes.

Projects

1. Edulocker - A decentralized application (DApp) for **tamper-proof academic document storage and verification** using **Ethereum, IPFS, Solidity, and React**.
2. Land Registry Web - A decentralized land registry system built on Polygon blockchain, inspired by IBM's Ghana blockchain land registry project. Eliminates paper-based title deeds, fraud, and slow verification by recording land ownership permanently on-chain.

3. LMS System - A role-based Learning Management System (LMS) with an Academic Performance Evaluator that helps manage students, courses, quizzes, and study materials. It offers admin, faculty, and student dashboards with automated grading and performance analytics to streamline academic tracking and evaluation in one platform.

4. Hospital Blockchain Project - Blockchain-based hospital management system with patient records and appointment tokens
